**The Free High School Science Texts:  
Textbooks for High School Students  
Studying the Sciences  
Physics  
Grades 10 - 12**

**Version 0  
November 9, 2008**

Copyright 2007 "Free High School Science Texts"

Permission **is** granted to copy, distribute and/or modify this document under the terms of the GNU Free Documentation License, Version 1.2 or any later version published by the Free Software Foundation; with no Invariant Sections, no Front-Cover Texts, and no Back-Cover Texts. A copy of the license is included in the section entitled "GNU Free Documentation License".

**STOP!!!!**

Did you notice the **FREEDOMS** we've granted you?

Our copyright license is **different!** It grants freedoms rather than just imposing restrictions like all those other textbooks you probably own or use.

- We know people copy textbooks illegally but we would LOVE it if you copied our's - go ahead copy to your hearts content, **legally!**
- Publishers' revenue is generated by controlling the market, we don't want any money, go ahead, distribute our books far and wide - we DARE you!
- Ever wanted to change your textbook? Of course you have! Go ahead, change ours, make your own version, get your friends together, rip it apart and put it back together the way you like it. That's what we really want!
- Copy, modify, adapt, enhance, share, critique, adore, and contextualise. Do it all, do it with your colleagues, your friends, or alone but get involved! Together we can overcome the challenges our complex and diverse country presents.
- So what is the catch? The only thing you can't do is take this book, make a few changes and then tell others that they can't do the same with your changes. It's share and share-alike and we know you'll agree that is only fair.
- These books were written by volunteers who want to help support education, who want the facts to be freely available for teachers to copy, adapt and re-use. Thousands of hours went into making them and they are a gift to everyone in the education community.

## FHSST Core Team

Mark Horner ; Samuel Halliday ; Sarah Blyth ; Rory Adams ; Spencer Wheaton

## FHSST Editors

Jaynie Padayachee ; Joanne Boule ; Diana Mulcahy ; Annette Nell ; René Toerien ; Donovan  
Whitfield

## FHSST Contributors

Rory Adams ; Prashant Arora ; Richard Baxter ; Dr. Sarah Blyth ; Sebastian Bodenstein ;  
Graeme Broster ; Richard Case ; Brett Cocks ; Tim Crombie ; Dr. Anne Dabrowski ; Laura  
Daniels ; Sean Dobbs ; Fernando Durrell ; Dr. Dan Dwyer ; Frans van Eeden ; Giovanni  
Franzoni ; Ingrid von Glehn ; Tamara von Glehn ; Lindsay Glesener ; Dr. Vanessa Godfrey ; Dr.  
Johan Gonzalez ; Hemant Gopal ; Umeshree Govender ; Heather Gray ; Lynn Greeff ; Dr. Tom  
Gutierrez ; Brooke Haag ; Kate Hadley ; Dr. Sam Halliday ; Asheena Hanuman ; Neil Hart ;  
Nicholas Hatcher ; Dr. Mark Horner ; Robert Hovden ; Mfandaidza Hove ; Jennifer Hsieh ;  
Clare Johnson ; Luke Jordan ; Tana Joseph ; Dr. Jennifer Klay ; Lara Kruger ; Sihle Kubheka ;  
Andrew Kubik ; Dr. Marco van Leeuwen ; Dr. Anton Machacek ; Dr. Komal Maheshwari ;  
Kosma von Maltitz ; Nicole Masureik ; John Mathew ; JoEllen McBride ; Nikolai Meures ;  
Riana Meyer ; Jenny Miller ; Abdul Mirza ; Asogan Moodaly ; Jothi Moodley ; Nolene Naidu ;  
Tyrone Negus ; Thomas O'Donnell ; Dr. Markus Oldenburg ; Dr. Jaynie Padayachee ;  
Nicolette Pekeur ; Sirika Pillay ; Jacques Plaut ; Andrea Prinsloo ; Joseph Raimondo ; Sanya  
Rajani ; Prof. Sergey Rakityansky ; Alastair Ramlakan ; Razvan Remsing ; Max Richter ; Sean  
Riddle ; Evan Robinson ; Dr. Andrew Rose ; Bianca Ruddy ; Katie Russell ; Duncan Scott ;  
Helen Seals ; Ian Sherratt ; Roger Sieloff ; Bradley Smith ; Greg Solomon ; Mike Stringer ;  
Shen Tian ; Robert Torregrosa ; Jimmy Tseng ; Helen Waugh ; Dr. Dawn Webber ; Michelle  
Wen ; Dr. Alexander Wetzler ; Dr. Spencer Wheaton ; Vivian White ; Dr. Gerald Wigger ;  
Harry Wiggins ; Wendy Williams ; Julie Wilson ; Andrew Wood ; Emma Wormauld ; Sahal  
Yacoob ; Jean Youssef

Contributors and editors have made a sincere effort to produce an accurate and useful resource.  
Should you have suggestions, find mistakes or be prepared to donate material for inclusion,  
please don't hesitate to contact us. We intend to work with all who are willing to help make  
this a continuously evolving resource!

# Contents

<b>I</b>	<b>Introduction</b>	<b>1</b>
1	What is Physics?	3
<b>II</b>	<b>Grade 10 - Physics</b>	<b>5</b>
<b>2</b>	<b>Units</b>	<b>9</b>
2.1	Introduction . . . . .	9
2.2	Unit Systems . . . . .	9
2.2.1	SI Units . . . . .	9
2.2.2	The Other Systems of Units . . . . .	10
2.3	Writing Units as Words or Symbols . . . . .	10
2.4	Combinations of SI Base Units . . . . .	12
2.5	Rounding, Scientific Notation and Significant Figures . . . . .	12
2.5.1	Rounding Off . . . . .	12
2.5.2	Error Margins . . . . .	13
2.5.3	Scientific Notation . . . . .	13
2.5.4	Significant Figures . . . . .	15
2.6	Prefixes of Base Units . . . . .	15
2.7	The Importance of Units . . . . .	17
2.8	How to Change Units . . . . .	17
2.8.1	Two other useful conversions . . . . .	19
2.9	A sanity test . . . . .	19
2.10	Summary . . . . .	19
2.11	End of Chapter Exercises . . . . .	21
<b>3</b>	<b>Motion in One Dimension - Grade 10</b>	<b>23</b>
3.1	Introduction . . . . .	23
3.2	Reference Point, Frame of Reference and Position . . . . .	23
3.2.1	Frames of Reference . . . . .	23
3.2.2	Position . . . . .	25
3.3	Displacement and Distance . . . . .	28
3.3.1	Interpreting Direction . . . . .	29
3.3.2	Differences between Distance and Displacement . . . . .	29
3.4	Speed, Average Velocity and Instantaneous Velocity . . . . .	31

3.4.1	Differences between Speed and Velocity . . . . .	35
3.5	Acceleration . . . . .	38
3.6	Description of Motion . . . . .	39
3.6.1	Stationary Object . . . . .	40
3.6.2	Motion at Constant Velocity . . . . .	41
3.6.3	Motion at Constant Acceleration . . . . .	46
3.7	Summary of Graphs . . . . .	48
3.8	Worked Examples . . . . .	49
3.9	Equations of Motion . . . . .	54
3.9.1	Finding the Equations of Motion . . . . .	54
3.10	Applications in the Real-World . . . . .	59
3.11	Summary . . . . .	61
3.12	End of Chapter Exercises: Motion in One Dimension . . . . .	62
<b>4</b>	<b>Gravity and Mechanical Energy - Grade 10</b>	<b>67</b>
4.1	Weight . . . . .	67
4.1.1	Differences between Mass and Weight . . . . .	68
4.2	Acceleration due to Gravity . . . . .	69
4.2.1	Gravitational Fields . . . . .	69
4.2.2	Free fall . . . . .	69
4.3	Potential Energy . . . . .	73
4.4	Kinetic Energy . . . . .	75
4.4.1	Checking units . . . . .	77
4.5	Mechanical Energy . . . . .	78
4.5.1	Conservation of Mechanical Energy . . . . .	78
4.5.2	Using the Law of Conservation of Energy . . . . .	79
4.6	Energy graphs . . . . .	82
4.7	Summary . . . . .	83
4.8	End of Chapter Exercises: Gravity and Mechanical Energy . . . . .	84
<b>5</b>	<b>Transverse Pulses - Grade 10</b>	<b>87</b>
5.1	Introduction . . . . .	87
5.2	What is a <i>medium</i> ? . . . . .	87
5.3	What is a <i>pulse</i> ? . . . . .	87
5.3.1	Pulse Length and Amplitude . . . . .	88
5.3.2	Pulse Speed . . . . .	89
5.4	Graphs of Position and Velocity . . . . .	90
5.4.1	Motion of a Particle of the Medium . . . . .	90
5.4.2	Motion of the Pulse . . . . .	92
5.5	Transmission and Reflection of a Pulse at a Boundary . . . . .	96
5.6	Reflection of a Pulse from Fixed and Free Ends . . . . .	97
5.6.1	Reflection of a Pulse from a Fixed End . . . . .	97

5.6.2	Reflection of a Pulse from a Free End . . . . .	98
5.7	Superposition of Pulses . . . . .	99
5.8	Exercises - Transverse Pulses . . . . .	102
<b>6</b>	<b>Transverse Waves - Grade 10</b>	<b>105</b>
6.1	Introduction . . . . .	105
6.2	What is a <i>transverse wave</i> ? . . . . .	105
6.2.1	Peaks and Troughs . . . . .	106
6.2.2	Amplitude and Wavelength . . . . .	107
6.2.3	Points in Phase . . . . .	109
6.2.4	Period and Frequency . . . . .	110
6.2.5	Speed of a Transverse Wave . . . . .	111
6.3	Graphs of Particle Motion . . . . .	115
6.4	Standing Waves and Boundary Conditions . . . . .	118
6.4.1	Reflection of a Transverse Wave from a Fixed End . . . . .	118
6.4.2	Reflection of a Transverse Wave from a Free End . . . . .	118
6.4.3	Standing Waves . . . . .	118
6.4.4	Nodes and anti-nodes . . . . .	122
6.4.5	Wavelengths of Standing Waves with Fixed and Free Ends . . . . .	122
6.4.6	Superposition and Interference . . . . .	125
6.5	Summary . . . . .	127
6.6	Exercises . . . . .	127
<b>7</b>	<b>Geometrical Optics - Grade 10</b>	<b>129</b>
7.1	Introduction . . . . .	129
7.2	Light Rays . . . . .	129
7.2.1	Shadows . . . . .	132
7.2.2	Ray Diagrams . . . . .	132
7.3	Reflection . . . . .	132
7.3.1	Terminology . . . . .	133
7.3.2	Law of Reflection . . . . .	133
7.3.3	Types of Reflection . . . . .	135
7.4	Refraction . . . . .	137
7.4.1	Refractive Index . . . . .	139
7.4.2	Snell's Law . . . . .	139
7.4.3	Apparent Depth . . . . .	143
7.5	Mirrors . . . . .	146
7.5.1	Image Formation . . . . .	146
7.5.2	Plane Mirrors . . . . .	147
7.5.3	Ray Diagrams . . . . .	148
7.5.4	Spherical Mirrors . . . . .	150
7.5.5	Concave Mirrors . . . . .	150

7.5.6	Convex Mirrors . . . . .	153
7.5.7	Summary of Properties of Mirrors . . . . .	154
7.5.8	Magnification . . . . .	154
7.6	Total Internal Reflection and Fibre Optics . . . . .	156
7.6.1	Total Internal Reflection . . . . .	156
7.6.2	Fibre Optics . . . . .	161
7.7	Summary . . . . .	163
7.8	Exercises . . . . .	164
<b>8</b>	<b>Magnetism - Grade 10</b>	<b>167</b>
8.1	Introduction . . . . .	167
8.2	Magnetic fields . . . . .	167
8.3	Permanent magnets . . . . .	169
8.3.1	The poles of permanent magnets . . . . .	169
8.3.2	Magnetic attraction and repulsion . . . . .	169
8.3.3	Representing magnetic fields . . . . .	170
8.4	The compass and the earth's magnetic field . . . . .	173
8.4.1	The earth's magnetic field . . . . .	175
8.5	Summary . . . . .	175
8.6	End of chapter exercises . . . . .	176
<b>9</b>	<b>Electrostatics - Grade 10</b>	<b>177</b>
9.1	Introduction . . . . .	177
9.2	Two kinds of charge . . . . .	177
9.3	Unit of charge . . . . .	177
9.4	Conservation of charge . . . . .	177
9.5	Force between Charges . . . . .	178
9.6	Conductors and insulators . . . . .	181
9.6.1	The electroscope . . . . .	182
9.7	Attraction between charged and uncharged objects . . . . .	183
9.7.1	Polarisation of Insulators . . . . .	183
9.8	Summary . . . . .	184
9.9	End of chapter exercise . . . . .	184
<b>10</b>	<b>Electric Circuits - Grade 10</b>	<b>187</b>
10.1	Electric Circuits . . . . .	187
10.1.1	Closed circuits . . . . .	187
10.1.2	Representing electric circuits . . . . .	188
10.2	Potential Difference . . . . .	192
10.2.1	Potential Difference . . . . .	192
10.2.2	Potential Difference and Parallel Resistors . . . . .	193
10.2.3	Potential Difference and Series Resistors . . . . .	194
10.2.4	Ohm's Law . . . . .	194

10.2.5 EMF . . . . .	195
10.3 Current . . . . .	198
10.3.1 Flow of Charge . . . . .	198
10.3.2 Current . . . . .	198
10.3.3 Series Circuits . . . . .	199
10.3.4 Parallel Circuits . . . . .	200
10.4 Resistance . . . . .	202
10.4.1 What causes resistance? . . . . .	202
10.4.2 Resistors in electric circuits . . . . .	202
10.5 Instruments to Measure voltage, current and resistance . . . . .	204
10.5.1 Voltmeter . . . . .	204
10.5.2 Ammeter . . . . .	204
10.5.3 Ohmmeter . . . . .	204
10.5.4 Meters Impact on Circuit . . . . .	205
10.6 Exercises - Electric circuits . . . . .	205
<b>III Grade 11 - Physics</b>	<b>209</b>
<b>11 Vectors</b>	<b>211</b>
11.1 Introduction . . . . .	211
11.2 Scalars and Vectors . . . . .	211
11.3 Notation . . . . .	211
11.3.1 Mathematical Representation . . . . .	212
11.3.2 Graphical Representation . . . . .	212
11.4 Directions . . . . .	212
11.4.1 Relative Directions . . . . .	212
11.4.2 Compass Directions . . . . .	213
11.4.3 Bearing . . . . .	213
11.5 Drawing Vectors . . . . .	214
11.6 Mathematical Properties of Vectors . . . . .	215
11.6.1 Adding Vectors . . . . .	215
11.6.2 Subtracting Vectors . . . . .	217
11.6.3 Scalar Multiplication . . . . .	218
11.7 Techniques of Vector Addition . . . . .	218
11.7.1 Graphical Techniques . . . . .	218
11.7.2 Algebraic Addition and Subtraction of Vectors . . . . .	223
11.8 Components of Vectors . . . . .	228
11.8.1 Vector addition using components . . . . .	231
11.8.2 Summary . . . . .	235
11.8.3 End of chapter exercises: Vectors . . . . .	236
11.8.4 End of chapter exercises: Vectors - Long questions . . . . .	237

<b>12 Force, Momentum and Impulse - Grade 11</b>	<b>239</b>
12.1 Introduction . . . . .	239
12.2 Force . . . . .	239
12.2.1 What is a <i>force</i> ? . . . . .	239
12.2.2 Examples of Forces in Physics . . . . .	240
12.2.3 Systems and External Forces . . . . .	241
12.2.4 Force Diagrams . . . . .	242
12.2.5 Free Body Diagrams . . . . .	243
12.2.6 Finding the Resultant Force . . . . .	244
12.2.7 Exercise . . . . .	246
12.3 Newton's Laws . . . . .	246
12.3.1 Newton's First Law . . . . .	247
12.3.2 Newton's Second Law of Motion . . . . .	249
12.3.3 Exercise . . . . .	261
12.3.4 Newton's Third Law of Motion . . . . .	263
12.3.5 Exercise . . . . .	267
12.3.6 Different types of forces . . . . .	268
12.3.7 Exercise . . . . .	275
12.3.8 Forces in equilibrium . . . . .	276
12.3.9 Exercise . . . . .	279
12.4 Forces between Masses . . . . .	282
12.4.1 Newton's Law of Universal Gravitation . . . . .	282
12.4.2 Comparative Problems . . . . .	284
12.4.3 Exercise . . . . .	286
12.5 Momentum and Impulse . . . . .	287
12.5.1 Vector Nature of Momentum . . . . .	290
12.5.2 Exercise . . . . .	291
12.5.3 Change in Momentum . . . . .	291
12.5.4 Exercise . . . . .	293
12.5.5 Newton's Second Law revisited . . . . .	293
12.5.6 Impulse . . . . .	294
12.5.7 Exercise . . . . .	296
12.5.8 Conservation of Momentum . . . . .	297
12.5.9 Physics in Action: Impulse . . . . .	300
12.5.10 Exercise . . . . .	301
12.6 Torque and Levers . . . . .	302
12.6.1 Torque . . . . .	302
12.6.2 Mechanical Advantage and Levers . . . . .	305
12.6.3 Classes of levers . . . . .	307
12.6.4 Exercise . . . . .	308
12.7 Summary . . . . .	309
12.8 End of Chapter exercises . . . . .	310

<b>13 Geometrical Optics - Grade 11</b>	<b>327</b>
13.1 Introduction . . . . .	327
13.2 Lenses . . . . .	327
13.2.1 Converging Lenses . . . . .	329
13.2.2 Diverging Lenses . . . . .	340
13.2.3 Summary of Image Properties . . . . .	343
13.3 The Human Eye . . . . .	344
13.3.1 Structure of the Eye . . . . .	345
13.3.2 Defects of Vision . . . . .	346
13.4 Gravitational Lenses . . . . .	347
13.5 Telescopes . . . . .	347
13.5.1 Refracting Telescopes . . . . .	347
13.5.2 Reflecting Telescopes . . . . .	348
13.5.3 Southern African Large Telescope . . . . .	348
13.6 Microscopes . . . . .	349
13.7 Summary . . . . .	351
13.8 Exercises . . . . .	352
<b>14 Longitudinal Waves - Grade 11</b>	<b>355</b>
14.1 Introduction . . . . .	355
14.2 What is a <i>longitudinal wave</i> ? . . . . .	355
14.3 Characteristics of Longitudinal Waves . . . . .	356
14.3.1 Compression and Rarefaction . . . . .	356
14.3.2 Wavelength and Amplitude . . . . .	357
14.3.3 Period and Frequency . . . . .	357
14.3.4 Speed of a Longitudinal Wave . . . . .	358
14.4 Graphs of Particle Position, Displacement, Velocity and Acceleration . . . . .	359
14.5 Sound Waves . . . . .	360
14.6 Seismic Waves . . . . .	361
14.7 Summary - Longitudinal Waves . . . . .	361
14.8 Exercises - Longitudinal Waves . . . . .	362
<b>15 Sound - Grade 11</b>	<b>363</b>
15.1 Introduction . . . . .	363
15.2 Characteristics of a Sound Wave . . . . .	363
15.2.1 Pitch . . . . .	364
15.2.2 Loudness . . . . .	364
15.2.3 Tone . . . . .	364
15.3 Speed of Sound . . . . .	365
15.4 Physics of the Ear and Hearing . . . . .	365
15.4.1 Intensity of Sound . . . . .	366
15.5 Ultrasound . . . . .	367

15.6 SONAR . . . . .	368
15.6.1 Echolocation . . . . .	368
15.7 Summary . . . . .	369
15.8 Exercises . . . . .	369
<b>16 The Physics of Music - Grade 11</b>	<b>373</b>
16.1 Introduction . . . . .	373
16.2 Standing Waves in String Instruments . . . . .	373
16.3 Standing Waves in Wind Instruments . . . . .	377
16.4 Resonance . . . . .	382
16.5 Music and Sound Quality . . . . .	384
16.6 Summary - The Physics of Music . . . . .	385
16.7 End of Chapter Exercises . . . . .	386
<b>17 Electrostatics - Grade 11</b>	<b>387</b>
17.1 Introduction . . . . .	387
17.2 Forces between charges - Coulomb's Law . . . . .	387
17.3 Electric field around charges . . . . .	392
17.3.1 Electric field lines . . . . .	393
17.3.2 Positive charge acting on a test charge . . . . .	393
17.3.3 Combined charge distributions . . . . .	394
17.3.4 Parallel plates . . . . .	397
17.4 Electrical potential energy and potential . . . . .	400
17.4.1 Electrical potential . . . . .	400
17.4.2 Real-world application: lightning . . . . .	402
17.5 Capacitance and the parallel plate capacitor . . . . .	403
17.5.1 Capacitors and capacitance . . . . .	403
17.5.2 Dielectrics . . . . .	404
17.5.3 Physical properties of the capacitor and capacitance . . . . .	404
17.5.4 Electric field in a capacitor . . . . .	405
17.6 Capacitor as a circuit device . . . . .	406
17.6.1 A capacitor in a circuit . . . . .	406
17.6.2 Real-world applications: capacitors . . . . .	407
17.7 Summary . . . . .	407
17.8 Exercises - Electrostatics . . . . .	407
<b>18 Electromagnetism - Grade 11</b>	<b>413</b>
18.1 Introduction . . . . .	413
18.2 Magnetic field associated with a current . . . . .	413
18.2.1 Real-world applications . . . . .	418
18.3 Current induced by a changing magnetic field . . . . .	420
18.3.1 Real-life applications . . . . .	422
18.4 Transformers . . . . .	423

18.4.1 Real-world applications . . . . .	425
18.5 Motion of a charged particle in a magnetic field . . . . .	425
18.5.1 Real-world applications . . . . .	426
18.6 Summary . . . . .	427
18.7 End of chapter exercises . . . . .	427
<b>19 Electric Circuits - Grade 11</b>	<b>429</b>
19.1 Introduction . . . . .	429
19.2 Ohm's Law . . . . .	429
19.2.1 Definition of Ohm's Law . . . . .	429
19.2.2 Ohmic and non-ohmic conductors . . . . .	431
19.2.3 Using Ohm's Law . . . . .	432
19.3 Resistance . . . . .	433
19.3.1 Equivalent resistance . . . . .	433
19.3.2 Use of Ohm's Law in series and parallel Circuits . . . . .	438
19.3.3 Batteries and internal resistance . . . . .	440
19.4 Series and parallel networks of resistors . . . . .	442
19.5 Wheatstone bridge . . . . .	445
19.6 Summary . . . . .	447
19.7 End of chapter exercise . . . . .	447
<b>20 Electronic Properties of Matter - Grade 11</b>	<b>451</b>
20.1 Introduction . . . . .	451
20.2 Conduction . . . . .	451
20.2.1 Metals . . . . .	453
20.2.2 Insulator . . . . .	453
20.2.3 Semi-conductors . . . . .	454
20.3 Intrinsic Properties and Doping . . . . .	454
20.3.1 Surplus . . . . .	455
20.3.2 Deficiency . . . . .	455

## Chapter 5

# Transverse Pulses - Grade 10

### 5.1 Introduction

This chapter forms the basis of the discussion into mechanical waves. Waves are all around us, even though most of us are not aware of it. The most common waves are waves in the sea, but waves can be created in any container of water, ranging from an ocean to a tea-cup. Simply, a wave is moving energy.

### 5.2 What is a medium?

In this chapter, as well as in the following chapters, we will speak about waves moving in a medium. A medium is just the substance or material through which waves move. In other words the medium carries the wave from one place to another. The medium does not create the wave and the medium is not the wave. Air is a medium for sound waves, water is a medium for water waves and rock is a medium for earthquakes (which are also a type of wave). Air, water and rock are therefore examples of media (media is the plural of medium).

#### **Definition: Medium**

A medium is the substance or material in which a wave will move.

In each medium, the atoms that make up the medium are moved *temporarily* from their rest position. In order for a wave to travel, the different parts of the medium must be able to interact with each other.

### 5.3 What is a pulse?

---

#### **Activity :: Investigation : Observation of Pulses**

Take a heavy rope. Have two people hold the rope stretched out horizontally. Flick the rope at one end only once.

What happens to the disturbance that you created in the rope? Does it stay at the place where it was created or does it move down the length of the rope?

In the activity, we created a *pulse*. A pulse is a *single* disturbance that moves through a medium. A transverse pulse moves perpendicular to the medium. Figure 5.1 shows an example of a transverse pulse. In the activity, the rope or spring was held horizontally and the pulse moved the rope up and down. This was an example of a transverse pulse.

**Definition: Pulse**

A pulse is a single disturbance that moves through a medium.

### 5.3.1 Pulse Length and Amplitude

The amplitude of a pulse is a measurement of how far the medium is displaced from a position of rest. The pulse length is a measurement of how long the pulse is. Both these quantities are shown in Figure 5.1.

**Definition: Amplitude**

The amplitude of a pulse is a measurement of how far the medium is displaced from rest.

Figure 5.1: Example of a transverse pulse

**Activity :: Investigation : Pulse Length and Amplitude**

The graphs below show the positions of a pulse at different times.

Use your ruler to measure the lengths of  $a$  and  $p$ . Fill your answers in the table.

Time	$a$	$p$
$t = 0$ s		
$t = 1$ s		
$t = 2$ s		
$t = 3$ s		

What do you notice about the values of  $a$  and  $p$ ?

---

In the activity, we found that the values for how high the pulse ( $a$ ) is and how wide the pulse ( $p$ ) is the same at different times. *Pulse length* and *amplitude* are two important quantities of a pulse.

### 5.3.2 Pulse Speed

#### Definition: Pulse Speed

Pulse speed is the distance a pulse travels in a specific time.

In Chapter 3 we saw that speed was defined as the distance travelled in a specified time. We can use the same definition of speed to calculate how fast a pulse travels. If the pulse travels a distance  $d$  in a time  $t$ , then the pulse speed  $v$  is:

$$v = \frac{d}{t}$$

#### Worked Example 22: Pulse Speed

**Question:** A pulse covers a distance of 2 m in 4 s on a heavy rope. Calculate the pulse speed.

**Answer**

**Step 5 : Determine what is given and what is required**

We are given:

- the distance travelled by the pulse:  $d = 2$  m
- the time taken to travel 2 m:  $t = 4$  s

We are required to calculate the speed of the pulse.

**Step 6 : Determine how to approach the problem**

We can use:

$$v = \frac{d}{t}$$

to calculate the speed of the pulse.

**Step 7 : Calculate the pulse speed**

$$\begin{aligned} v &= \frac{d}{t} \\ &= \frac{2 \text{ m}}{4 \text{ s}} \\ &= 0,5 \text{ m} \cdot \text{s}^{-1} \end{aligned}$$

**Step 8 : Write the final answer**

The pulse speed is  $0,5 \text{ m} \cdot \text{s}^{-1}$ .

**Important:** The pulse speed depends on the properties of the medium and not on the amplitude or pulse length of the pulse.

### Exercise: Pulse Speed

1. A pulse covers a distance of 5 m in 15 seconds. Calculate the speed of the pulse.
2. A pulse has a speed of  $5 \text{ cm}\cdot\text{s}^{-1}$ . How far does it travel in 2,5 seconds?
3. A pulse has a speed of  $0,5 \text{ m}\cdot\text{s}^{-1}$ . How long does it take to cover a distance of 25 cm?
4. How long will it take a pulse moving at  $0,25 \text{ m}\cdot\text{s}^{-1}$  to travel a distance of 20 m?

5. Examine the two pulses below and state which has the higher speed. Explain your answer.

6. Ocean waves do not bring more water onto the shore until the beach is completely submerged. Explain why this is so.

## 5.4 Graphs of Position and Velocity

When a pulse moves through a medium, there are two different motions: the motion of the particles of the medium and the motion of the pulse. These two motions are at right angles to each other when the pulse is transverse. Each motion will be discussed.

Consider the situation shown in Figure ???. The dot represents one particle of the medium. We see that as the pulse moves to the right the particle only moves up and down.

### 5.4.1 Motion of a Particle of the Medium

First we consider the motion of a particle of the medium when a pulse moves through the medium. For the explanation we will zoom into the medium so that we are looking at the atoms of the medium. These atoms are connected to each other as shown in Figure 5.2.

Figure 5.2: Particles in a medium.

When a pulse moves through the medium, the particles in the medium **only** move up and down. We can see this in the figure below which shows the motion of a single particle as a pulse moves through the medium.

**Important:** A particle in the medium **only** moves up and down when a transverse pulse moves through the medium. The pulse moves from left to right (or right to left). The motion of the particle is perpendicular to the motion of a transverse pulse.

If you consider the motion of the particle as a function of time, you can draw a graph of position vs. time and velocity vs. time.

---

**Activity :: Investigation : Drawing a position-time graph**

1. Study Figure ?? and complete the following table:

time (s)	0	1	2	3	4	5	6	7	8	9
position (cm)										

2. Use your table to draw a graph of position vs. time for a particle in a medium.

---

The position vs. time graph for a particle in a medium when a pulse passes through the medium is shown in Figure 5.3

---

**Activity :: Investigation : Drawing a velocity-time graph**

1. Study Figure 5.3 and Figure 5.4 and complete the following table:

Figure 5.3: Position against Time graph of a particle in the medium through which a transverse pulse is travelling.

time (s)	0	1	2	3	4	5	6	7	8	9
velocity (cm.s <sup>-1</sup> )										

2. Use your table to draw a graph of velocity vs time for a particle in a medium.

---

The velocity vs. time graph for a particle in a medium when a pulse passes through the medium is shown in Figure 5.4.

Figure 5.4: Velocity against Time graph of a particle in the medium through which a transverse pulse is travelling.

### 5.4.2 Motion of the Pulse

The motion of the pulse is much simpler than the motion of a particle in the medium.

**Important:** A point on a transverse pulse, eg. the peak, **only** moves in the direction of the motion of the pulse.

**Worked Example 23: Transverse pulse through a medium**

**Question:**

Figure 5.5: Position of the peak of a pulse at different times (since we know the shape of the pulse does not change we can look at only one point on the pulse to keep track of its position, the peak for example). The pulse moves to the right as shown by the arrow.

Given the series of snapshots of a transverse pulse moving through a medium, depicted in Figure 5.5, do the following:

- draw up a table of time, position and velocity,
- plot a position vs. time graph,
- plot a velocity vs. time graph.

**Answer**

**Step 1 : Interpreting the figure**

Figure 5.5 shows the motion of a pulse through a medium and a dot to indicate the same position on the pulse. If we follow the dot, we can draw a graph of position vs time for a pulse. At  $t = 0$  s the dot is at 0cm. At  $t = 1$  s the dot is 1 cm away from its original position. At  $t = 2$  s the dot is 2 cm away from its original position, and so on.

**Step 2 : We can draw the following table:**

time (s)	0	1	2	3	4	5	6	7	8	9
position (cm)										
velocity ( $\text{cm}\cdot\text{s}^{-1}$ )										

**Step 3 : A graph of position vs time is drawn as is shown in the figure.**

**Step 4 :** Similarly, a graph of velocity vs time is drawn and is shown in the figure below.

### Exercise: Travelling Pulse

1. A pulse is passed through a rope and the following pictures were obtained for each time interval:

(a) Complete the following table for a particle in the medium:

time (s)	0,00	0,25	0,50	0,75	1,00	1,25	1,50	1,75	2,00
position (mm)									
velocity (mm.s <sup>-1</sup> )									

- (b) Draw a position vs. time graph for the motion of a particle in the medium.
- (c) Draw a velocity vs. time graph for the motion of a particle in the medium.
- (d) Draw a position vs. time graph for the motion of the pulse through the rope.
- (e) Draw a velocity vs. time graph for the motion of the pulse through the rope.

## 5.5 Transmission and Reflection of a Pulse at a Boundary

What happens when a pulse travelling in one medium finds that medium is joined to another?

### Activity :: Investigation : Two ropes

Find two different ropes and tie both ropes together. Hold the joined ropes horizontally and create a pulse by flicking the rope up and down. What happens to the pulse when it encounters the join?

When a pulse meets a boundary between two media, part of the pulse is reflected and part of it is transmitted. You will see that in the thin rope the pulse moves back (is reflected). The pulse is also passed on (transmitted) to the thick rope and it moves away from the boundary.

Figure 5.6: Reflection and transmission of a pulse at the boundary between two media.

When a pulse is transmitted from one medium to another, like from a thin rope to a thicker one, the pulse will change where it meets the boundary of the two mediums (for example where the ropes are joined). When a pulse moves from a thin rope to a thicker one, the speed of the pulse will decrease. The pulse will move slower and the pulse length will increase.

Figure 5.7: Reflection and transmission of a pulse at the boundary between two media.

Figure 5.8: Reflection and transmission of a pulse at the boundary between two media.

When a pulse moves from a thick rope to a thinner one, the opposite happens. The pulse speed will increase and the pulse length will decrease.

When the speed of the pulse increases, the pulse length will decrease. If the speed decreases, the pulse length will increase. The **incident pulse** is the one that arrives at the boundary. The **reflected pulse** is the one that moves back, away from the boundary. The **transmitted pulse** is the one that moves into the new medium, away from the boundary.

### Exercise: Pulses at a Boundary I

- Fill in the blanks or select the correct answer: A pulse in a heavy rope is traveling towards the boundary with a thin piece of string.
  - The reflected pulse in the heavy rope **will/will not** be inverted because \_\_\_\_\_.
  - The speed of the transmitted pulse will be **greater than/less than/the same as** the speed of the incident pulse.
  - The speed of the reflected pulse will be **greater than/less than/the same as** the speed of the incident pulse.
  - The pulse length of the transmitted pulse will be **greater than/less than/the same as** the pulse length of the incident pulse.
  - The frequency of the transmitted pulse will be **greater than/less than/the same as** the frequency of the incident pulse.
- A pulse in a light string is traveling towards the boundary with a heavy rope.
  - The reflected pulse in the light rope **will/will not** be inverted because \_\_\_\_\_.
  - The speed of the transmitted pulse will be **greater than/less than/the same as** the speed of the incident pulse.
  - The speed of the reflected pulse will be **greater than/less than/the same as** the speed of the incident pulse.
  - The pulse length of the transmitted pulse will be **greater than/less than/the same as** the pulse length of the incident pulse.

## 5.6 Reflection of a Pulse from Fixed and Free Ends

Let us now consider what happens to a pulse when it reaches the end of a medium. The medium can be fixed, like a rope tied to a wall, or it can be free, like a rope tied loosely to a pole.

### 5.6.1 Reflection of a Pulse from a Fixed End

**Activity :: Investigation : Reflection of a Pulse from a Fixed End**

Tie a rope to a wall or some other object that cannot move. Create a pulse in the rope by flicking one end up and down. Observe what happens to the pulse when it reaches the wall.

Figure 5.9: Reflection of a pulse from a fixed end.

When the end of the medium is fixed, for example a rope tied to a wall, a pulse reflects from the fixed end, but the pulse is inverted (i.e. it is upside-down). This is shown in Figure 5.9.

**5.6.2 Reflection of a Pulse from a Free End****Activity :: Investigation : Reflection of a Pulse from a Free End**

Tie a rope to a pole in such a way that the rope can move up and down the pole. Create a pulse in the rope by flicking one end up and down. Observe what happens to the pulse when it reaches the pole.

When the end of the medium is free, for example a rope tied loosely to a pole, a pulse reflects from the free end, but the pulse is not inverted. This is shown in Figure 5.10. We draw the free end as a ring around the pole. The ring will move up and down the pole, while the pulse is reflected away from the pole.

Figure 5.10: Reflection of a pulse from a free end.

**Important:** The fixed and free ends that were discussed in this section are examples of *boundary conditions*. You will see more of boundary conditions as you progress in the Physics syllabus.

**Exercise: Pulses at a Boundary II**

1. A rope is tied to a tree and a single pulse is generated. What happens to the pulse as it reaches the tree? Draw a diagram to explain what happens.
2. A rope is tied to a ring that is loosely fitted around a pole. A single pulse is sent along the rope. What will happen to the pulse as it reaches the pole? Draw a diagram to explain your answer.

## 5.7 Superposition of Pulses

Two or more pulses can pass through the same medium at that same time. The resulting pulse is obtained by using the *principle of superposition*. The principle of superposition states that the effect of the pulses is the sum of their individual effects. After pulses pass through each other, each pulse continues along its original direction of travel, and their original amplitudes remain unchanged.

Constructive interference takes place when two pulses meet each other to create a larger pulse. The amplitude of the resulting pulse is the sum of the amplitudes of the two initial pulses. This is shown in Figure 5.11.

**Definition: Constructive interference is when two pulses meet, resulting in a bigger pulse.**

Figure 5.11: Superposition of two pulses: constructive interference.

Destructive interference takes place when two pulses meet and cancel each other. The amplitude of the resulting pulse is the sum of the amplitudes of the two initial pulses, but the one amplitude will be a negative number. This is shown in Figure 5.12. In general, amplitudes of individual pulses add together to give the amplitude of the resultant pulse.

**Definition: Destructive interference is when two pulses meet, resulting in a smaller pulse.**

Figure 5.12: Superposition of two pulses. The left-hand series of images demonstrates destructive interference, since the pulses cancel each other. The right-hand series of images demonstrate a partial cancellation of two pulses, as their amplitudes are not the same in magnitude.

### Worked Example 24: Superposition of Pulses

**Question:** The two pulses shown below approach each other at  $1 \text{ m}\cdot\text{s}^{-1}$ . Draw what the waveform would look like after 1 s, 2 s and 5 s.

#### Answer

##### Step 1 : After 1 s

After 1 s, pulse A has moved 1 m to the right and pulse B has moved 1 m to the left.

##### Step 2 : After 2 s

After 1 s more, pulse A has moved 1 m to the right and pulse B has moved 1 m to the left.

##### Step 3 : After 5 s

**Important:** The idea of superposition is one that occurs often in physics. You will see *much, much more* of superposition!

**Exercise: Superposition of Pulses**

1. For each of the following pulses, draw the resulting wave forms after 1 s, 2 s, 3 s, 4 s and 5 s. Each pulse is travelling at  $1 \text{ m}\cdot\text{s}^{-1}$ . Each block represents 1 m.

(a)

(b)

(c)

(d)

(e)

(f)

2. (a) What is superposition of waves?  
 (b) What is constructive interference? Use the letter "c" to indicate where constructive interference took place in each of your answers for question 1. Only look at diagrams for  $t = 3 \text{ s}$ .  
 (c) What is destructive interference? Use the letter "d" to indicate where destructive interference took place in each of your answers for question 1. Only look at diagrams for  $t = 2 \text{ s}$ .

## 5.8 Exercises - Transverse Pulses

- A heavy rope is flicked upwards, creating a single pulse in the rope. Make a drawing of the rope and indicate the following in your drawing:
  - The direction of motion of the pulse
  - Amplitude
  - Pulse length
  - Position of rest
- A pulse has a speed of  $2,5\text{m}\cdot\text{s}^{-1}$ . How far will it have travelled in 6s?
- A pulse covers a distance of 75cm in 2,5s. What is the speed of the pulse?
- How long does it take a pulse to cover a distance of 200mm if its speed is  $4\text{m}\cdot\text{s}^{-1}$ ?
- The following position-time graph for a pulse in a slinky spring is given. Draw an accurate sketch graph of the velocity of the pulse against time.

- The following velocity-time graph for a particle in a medium is given. Draw an accurate sketch graph of the position of the particle vs. time.

- Describe what happens to a pulse in a slinky spring when:
  - the slinky spring is tied to a wall.
  - the slinky spring is loose, i.e. not tied to a wall.
 (Draw diagrams to explain your answers.)
- The following diagrams each show two approaching pulses. Redraw the diagrams to show what type of interference takes place, and label the type of interference.

9. Two pulses, A and B, of identical frequency and amplitude are simultaneously generated in two identical wires of equal mass and length. Wire A is, however, pulled tighter than wire. Which pulse will arrive at the other end first, or will they both arrive at the same time?

# Appendix A

## GNU Free Documentation License

Version 1.2, November 2002

Copyright © 2000,2001,2002 Free Software Foundation, Inc.

59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

### PREAMBLE

The purpose of this License is to make a manual, textbook, or other functional and useful document “free” in the sense of freedom: to assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or non-commercially. Secondly, this License preserves for the author and publisher a way to get credit for their work, while not being considered responsible for modifications made by others.

This License is a kind of “copyleft”, which means that derivative works of the document must themselves be free in the same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

We have designed this License in order to use it for manuals for free software, because free software needs free documentation: a free program should come with manuals providing the same freedoms that the software does. But this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or whether it is published as a printed book. We recommend this License principally for works whose purpose is instruction or reference.

### APPLICABILITY AND DEFINITIONS

This License applies to any manual or other work, in any medium, that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. Such a notice grants a world-wide, royalty-free license, unlimited in duration, to use that work under the conditions stated herein. The “Document”, below, refers to any such manual or work. Any member of the public is a licensee, and is addressed as “you”. You accept the license if you copy, modify or distribute the work in a way requiring permission under copyright law.

A “Modified Version” of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.

A “Secondary Section” is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document’s overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (Thus, if the Document is in part a textbook of mathematics, a

Secondary Section may not explain any mathematics.) The relationship could be a matter of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The “Invariant Sections” are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License. If a section does not fit the above definition of Secondary then it is not allowed to be designated as Invariant. The Document may contain zero Invariant Sections. If the Document does not identify any Invariant Sections then there are none.

The “Cover Texts” are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License. A Front-Cover Text may be at most 5 words, and a Back-Cover Text may be at most 25 words.

A “Transparent” copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, that is suitable for revising the document straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup, or absence of markup, has been arranged to thwart or discourage subsequent modification by readers is not Transparent. An image format is not Transparent if used for any substantial amount of text. A copy that is not “Transparent” is called “Opaque”.

Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format,  $\LaTeX$  input format, SGML or XML using a publicly available DTD and standard-conforming simple HTML, PostScript or PDF designed for human modification. Examples of transparent image formats include PNG, XCF and JPG. Opaque formats include proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML, PostScript or PDF produced by some word processors for output purposes only.

The “Title Page” means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, “Title Page” means the text near the most prominent appearance of the work’s title, preceding the beginning of the body of the text.

A section “Entitled XYZ” means a named subunit of the Document whose title either is precisely XYZ or contains XYZ in parentheses following text that translates XYZ in another language. (Here XYZ stands for a specific section name mentioned below, such as “Acknowledgements”, “Dedications”, “Endorsements”, or “History”.) To “Preserve the Title” of such a section when you modify the Document means that it remains a section “Entitled XYZ” according to this definition.

The Document may include Warranty Disclaimers next to the notice which states that this License applies to the Document. These Warranty Disclaimers are considered to be included by reference in this License, but only as regards disclaiming warranties: any other implication that these Warranty Disclaimers may have is void and has no effect on the meaning of this License.

## VERBATIM COPYING

You may copy and distribute the Document in any medium, either commercially or non-commercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute. However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section A.

You may also lend copies, under the same conditions stated above, and you may publicly display copies.

## COPYING IN QUANTITY

If you publish printed copies (or copies in media that commonly have printed covers) of the Document, numbering more than 100, and the Document's license notice requires Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on the back cover. Both covers must also clearly and legibly identify you as the publisher of these copies. The front cover must present the full title with all words of the title equally prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim copying in other respects.

If the required texts for either cover are too voluminous to fit legibly, you should put the first ones listed (as many as fit reasonably) on the actual cover, and continue the rest onto adjacent pages.

If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a computer-network location from which the general network-using public has access to download using public-standard network protocols a complete Transparent copy of the Document, free of added material. If you use the latter option, you must take reasonably prudent steps, when you begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents or retailers) of that edition to the public.

It is requested, but not required, that you contact the authors of the Document well before redistributing any large number of copies, to give them a chance to provide you with an updated version of the Document.

## MODIFICATIONS

You may copy and distribute a Modified Version of the Document under the conditions of sections A and A above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, thus licensing distribution and modification of the Modified Version to whoever possesses a copy of it. In addition, you must do these things in the Modified Version:

1. Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should, if there were any, be listed in the History section of the Document). You may use the same title as a previous version if the original publisher of that version gives permission.
2. List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with at least five of the principal authors of the Document (all of its principal authors, if it has fewer than five), unless they release you from this requirement.
3. State on the Title page the name of the publisher of the Modified Version, as the publisher.
4. Preserve all the copyright notices of the Document.
5. Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.

6. Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown in the Addendum below.
7. Preserve in that license notice the full lists of Invariant Sections and required Cover Texts given in the Document's license notice.
8. Include an unaltered copy of this License.
9. Preserve the section Entitled "History", Preserve its Title, and add to it an item stating at least the title, year, new authors, and publisher of the Modified Version as given on the Title Page. If there is no section Entitled "History" in the Document, create one stating the title, year, authors, and publisher of the Document as given on its Title Page, then add an item describing the Modified Version as stated in the previous sentence.
10. Preserve the network location, if any, given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for previous versions it was based on. These may be placed in the "History" section. You may omit a network location for a work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives permission.
11. For any section Entitled "Acknowledgements" or "Dedications", Preserve the Title of the section, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.
12. Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or the equivalent are not considered part of the section titles.
13. Delete any section Entitled "Endorsements". Such a section may not be included in the Modified Version.
14. Do not re-title any existing section to be Entitled "Endorsements" or to conflict in title with any Invariant Section.
15. Preserve any Warranty Disclaimers.

If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version's license notice. These titles must be distinct from any other section titles.

You may add a section Entitled "Endorsements", provided it contains nothing but endorsements of your Modified Version by various parties—for example, statements of peer review or that the text has been approved by an organisation as the authoritative definition of a standard.

You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of Back-Cover Text may be added by (or through arrangements made by) any one entity. If the Document already includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the previous publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version.

## COMBINING DOCUMENTS

You may combine the Document with other documents released under this License, under the terms defined in section A above for modified versions, provided that you include in the

combination all of the Invariant Sections of all of the original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice, and that you preserve all their Warranty Disclaimers.

The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of Invariant Sections in the license notice of the combined work.

In the combination, you must combine any sections Entitled “History” in the various original documents, forming one section Entitled “History”; likewise combine any sections Entitled “Acknowledgements”, and any sections Entitled “Dedications”. You must delete all sections Entitled “Endorsements”.

## COLLECTIONS OF DOCUMENTS

You may make a collection consisting of the Document and other documents released under this License, and replace the individual copies of this License in the various documents with a single copy that is included in the collection, provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

You may extract a single document from such a collection, and distribute it individually under this License, provided you insert a copy of this License into the extracted document, and follow this License in all other respects regarding verbatim copying of that document.

## AGGREGATION WITH INDEPENDENT WORKS

A compilation of the Document or its derivatives with other separate and independent documents or works, in or on a volume of a storage or distribution medium, is called an “aggregate” if the copyright resulting from the compilation is not used to limit the legal rights of the compilation’s users beyond what the individual works permit. When the Document is included an aggregate, this License does not apply to the other works in the aggregate which are not themselves derivative works of the Document.

If the Cover Text requirement of section A is applicable to these copies of the Document, then if the Document is less than one half of the entire aggregate, the Document’s Cover Texts may be placed on covers that bracket the Document within the aggregate, or the electronic equivalent of covers if the Document is in electronic form. Otherwise they must appear on printed covers that bracket the whole aggregate.

## TRANSLATION

Translation is considered a kind of modification, so you may distribute translations of the Document under the terms of section A. Replacing Invariant Sections with translations requires special permission from their copyright holders, but you may include translations of some or all Invariant Sections in addition to the original versions of these Invariant Sections. You may include a translation of this License, and all the license notices in the Document, and any Warranty Disclaimers, provided that you also include the original English version of this License and the original versions of those notices and disclaimers. In case of a disagreement between the translation and the original version of this License or a notice or disclaimer, the original version will prevail.

If a section in the Document is Entitled “Acknowledgements”, “Dedications”, or “History”, the requirement (section A) to Preserve its Title (section A) will typically require changing the

actual title.

## TERMINATION

You may not copy, modify, sub-license, or distribute the Document except as expressly provided for under this License. Any other attempt to copy, modify, sub-license or distribute the Document is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

## FUTURE REVISIONS OF THIS LICENSE

The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See <http://www.gnu.org/copyleft/>.

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License “or any later version” applies to it, you have the option of following the terms and conditions either of that specified version or of any later version that has been published (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation.

## ADDENDUM: How to use this License for your documents

To use this License in a document you have written, include a copy of the License in the document and put the following copyright and license notices just after the title page:

Copyright © YEAR YOUR NAME. Permission is granted to copy, distribute and/or modify this document under the terms of the GNU Free Documentation License, Version 1.2 or any later version published by the Free Software Foundation; with no Invariant Sections, no Front-Cover Texts, and no Back-Cover Texts. A copy of the license is included in the section entitled “GNU Free Documentation License”.

If you have Invariant Sections, Front-Cover Texts and Back-Cover Texts, replace the “with...Texts.” line with this:

with the Invariant Sections being LIST THEIR TITLES, with the Front-Cover Texts being LIST, and with the Back-Cover Texts being LIST.

If you have Invariant Sections without Cover Texts, or some other combination of the three, merge those two alternatives to suit the situation.

If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel under your choice of free software license, such as the GNU General Public License, to permit their use in free software.
